

# INSTANT THREAT PROTECTION

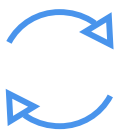

Your customers look to you to stay safe online. Unfortunately, security products often require a large maintenance overhead. Applications need to be installed and frequently updated. This means money coming out of your pocket. Plus, you know from your RMM that some devices lag far behind on updates. How can you ensure that every device is filtered and protected?

Security and Content Filtering doesn't have to be complicated. DNSFilter's cloud-managed solution ensures that you have a smooth and reliable deployment in about five minutes. After that, you never have to touch customer equipment again! Our web-based dashboard allows you to make adjustments from anywhere, on any device. You'll have complete visibility of all customer locations. You can even empower local users to change policies, further reducing your support overhead.

## Quick Setup

One simple configuration change to your network is all it takes. From there, all administration takes place in an intuitive and beautiful dashboard.

## Always Up to Date

No more patches, updates, or security fixes. Our service is continually updated with the latest threat and domain data.

## Fully Whitelabeled

Our dashboard and service is fully white labeled, allowing you to easily integrate DNSFilter as part of your customer offering.

## Remote Administration

All customer networks and policies can be easily managed online, by any smartphone, tablet, or PC.

## Responsive Partnership

We're built for MSPs. Our roadmap is driven by partner feedback - making sure you get the features you need.

## Roaming Clients

We offer roaming agents/clients for all major platforms: Windows, Android, iOS, and MacOS.
